

Fnordicyclic DT[®] (pinealia glandfnordia) Xtended Communication Pills

D A D A Sheet

Description

Fnordicyclic DT[®] (pinealia glandfnordia) is a proErisian, Aneristic suppressor agent. Each Fnordicyclic DT[®] tablet contains 500mg, 2300mg or 0mg of suprabsorbantia pheromonia KSC, formulated originally as a poison to kill horses and other large animals that had to be put down. Superabsorbantia pheromonia is administered as a grunderloom of R- and S- enmacocolate.

Chemically, superabsorbantia pheromonia is p,q (silly) 5-ricawiccathyne-23-skidooyne jabberwockiaethenol heliochloride. The empirical formula of superabsorbantia pheromonia is N₃O₅ T₁₇ K₉N₂ O W₂₃N₅.

(Particle Names suppressed pending copyright)

Superabsorbantia pheromonia occurs naturally in the feces of irradiated lab mice. When extracted, it is gelatinous in form with a molecular weight of 2323.5. It is readily soluble in battery acid, but relatively insoluble in cement mix.

Fnordicyclic DT[®] also contains the following inert ingredients: eye of newt, baking soda, Chlorox Bleach[™], anthrax glucose, anthrax ripple and baby frogs (fresh), grendloopintiacphianyl thississiliniotope, and soup.

System Components and Performance

Fnordicyclic DT[®] uses TCP/IP to travel through the body and eventually arrive outside of the pineal gland at a controlled rate of approximately 23 minutes. The system, which resembles a conventional tablet in appearance, is actually a tiny meta-amplifier encased in a high-tech gadget made of steel and whatnot. There is a laser-drilled smily face on the steel casing for aesthetic reasons vis a vis x-rays. When the system reaches the pineal gland, it attaches itself and mutters the password in its ear. The system is equipped with a password program that will crack a new password if Eris gets a hair across her butt and changes it on us. Once the password is given, the system permeates the membrane of the pineal gland and begins activating phase one, which eases and strengthens the two-way communication with Eris through the Pineal Gland.

Clinical Pharmacology

Superabsorbantia pheromonia enhances navigation of the high-tech gadget through the subject's blood stream. It exerts a direct spasmodic effect on all tissues and muscles as it moves throughout the body.

In patients with conditions resembling or referred to as lack of bladder control, superabsorbantia repeatedly kicks the bladder out of sheer spite, though cystometric studies have shown that strangely, this does not happen if one is within 35 (+/-5) yards of a restroom.

Anerisian activities cause the system to release certain pheromones that confuse the block of superabsorbantia pheromonia and in this case they usually get lost. If this happens, your toe will start whispering passwords.

Indications and Usage

Fnordicyclic DT[®] is a once-annually controlled release tablet that enhances pineal communication with (God)esses. It is indicated for use by people who have a subtly lopsided pineal gland.

Contraindications

Fnordicyclic DT[®] is contraindicated in patients who have excessively lopsided pineal glands. It will most likely drive them mad.

Military Uses

See Contraindications.

Pediatric Uses

Fnordicyclic DT[®] is recommended for use on patients of any age. Please let us know if it kills any children for future reference.

Table 1 - Incidents of Psychotic Episodes

The above chart, or the chart displayed above otherwise known as chart one and also occasionally as Joe, illustrates that the control group had, on the whole, more psychotic episodes than any other users of Fnordicyclic DT[®]. The (out of) control group was made up of various members from Mao's Prison for the Criminally Insane[®]. We have been assured by various scientists that this test was valid and our attorneys required us to post the chart here.

Clinical Studies

Clinical studies have proven that nine out of ten evangelists prefer Fnordicyclic DT[®] to any other pineal enhancer (of which there are none as of yet).

The system has been tested on individuals ranging from 17 to 3,100 years old, but should work fine on patients older and younger than the above ages.

Clinical studies have also shown that the 0mg pills seem much less effective than the 500mg and 2300mg pills. Also, many patients seemed to choke on the 2300mg pills.

Finally, clinical studies have shown that photocopying one's private parts does not cause cancer.

How Supplied

Fnordicyclic DT[®] is available in three strengths: the economically priced 0mg green pill, the ludicrously priced 500mg red pill, and the delightfully money-making 2300mg black pill, and are imprinted with "Fnord", "Eris", and "Whoa!", respectively. Bottle contains one tablet. Pills should be taken annually on Jake Day.

0mg	1 count bottle	T23517
500mg	1 count bottle	T23523
2300mg	1 count bottle	T23525

Storage

Fnordicyclic DT[®] may not be stored in any pentagon-shaped device. Storage in any 5-sided device resembling a pentagon may lead to undesirable side-effects too horrible to be mentioned here. Protect from sharks.

Adverse Reactions

Possible adverse reactions to Fnordicyclic DT[®] include but are not limited to skin punctures, headaches, tummyaches, earaches, talking toes, cancer, emphesima, AIDS, head lacerations, diarrhea, vomiting, nausea, altercations, alliterations, metabolic shutdown, brain damage, full frontal lobotomy, pineal disfunction, rectal warts, elephantitis, weird sexual urges, chaotic fibrations, liver spots, beer bellies, hepatitis-b, death, tooth rot, vaginal secretions, torn membranes, dislocation of the spleen and other spleen-like organs, extreme hair growth, soup, and, in very rare cases (5/10), eyestrain.

Overdosage

In cases of overdosage just lie back and be calm. Any excitement or stimulation at all after a massive dose of Fnordicyclic DT[®] can cause massive amounts of damage to your pineal gland, therefore don't call the hospital. They will send an ambulance, and the siren will probably speed up your heart rate and kill you. Just stay calm. Oh, and unplug your phone, too.

About Pineal Retensinging

All research herein was performed by the 23 Apples of Eris. The 23 Apples of Eris recommend this product highly for inclusion in Napster. More information about lopsided pineal glands as well as less extreme treatments for this horrendous condition may be found in the Principia Discordia and the Illuminatus! Trilogy. Online, pineal retensing is practised furtively at CastleChaos.Com. Under no condition should anybody attempt to sue us for any reason, or the side effects may be deadly.

Notes

- All occurrences of third eye growth are probably due to insufficient Vitamin C levels. You should eat an orange.
- Our marketing division has recommended that we recommend to you that you do not read the section entitled "Adverse Reactions".
- No monkeys were harmed during the making of this DaDa Sheet.
- Our numbering system has somehow gotten all screwed up.
- All references to snarks have been purged from this document for your convenience.

Disclaimer

The Castle Chaos and Cocaine Importers Inc. is not responsible for any side-splitting effects (obviously, if you've read this) this dada sheet might cause, as is illustrated by the graph below:

Manufacturing

The system is manufactured at great expense in a basement somewhere in Idaho. We use only the finest materials to ensure your continued satisfaction with our product. If for any reason you are dissatisfied with this product, please let us know at the following address:

The California State Bureau of Furniture and Bedding
1021 'D' Street
Sacramento, CA 94814

Please send a self-addressed, stamped envelope and a recent snapshot.

P.S.

There has been some loose talk around the industry that these pills do not exist. This is a vicious lie. Obviously, no one would go through the trouble of creating a Dada Sheet about something that does not exist. It would be an inane waste of time and resources. What kind of a sick fuck would do something like that? It makes no sense, and therefore, as you well know, must be logically discarded as being a possibility. Therefore, by simple logical reasoning, we have determined that these pills do in fact exist and you really should get some for you and your family's well-being because, well, if you can't talk to the (God)ess, what good is life, really?
